Board of Administration
City Employees' Retirement System
360 East Second Street, 8th Floor
Los Angeles, California 90012

Members of the Board:

We are pleased to present this actuarial valuation report as of June 30, 2000 for the City Employees' Retirement System.

This report is divided into three parts:

A. Valuation Summary: This section contains an overview of significant valuation results.

B. Valuation Detail: This section contains more detailed results of the valuation. Section I contains details of the retirement valuation. Section II contains details of the health subsidy valuation.

C. Exhibits: This section contains information on plan demographics, plan provisions, and actuarial assumptions used in the valuation.

We appreciate the opportunity to serve the City of Los Angeles and the Board of Administration as actuary for the City Employees' Retirement System.

Sincerely,

Lawrence Di Fiore, FSA
Consulting Actuary

Thomas R. Supple, ASA

CITY OF LOS ANGELES
CITY EMPLOYEES' RETIREMENT SYSTEM

Actuarial Valuation As Of June 30, 2000

Introduction

Officers and employees of the City of Los Angeles and their beneficiaries are entitled to retirement benefits (including disability and survivors' benefits) and health subsidy benefits under Article XXXIV of the Charter of the City of Los Angeles and by related ordinances. This retirement system is known as the City Employees' Retirement System.

This report contains the results of the June 30, 2000 valuation of both the retirement and health subsidy benefits of the Retirement System. It contains our calculations of the annual budget of the System, as provided in Section 506 of the Charter. It also contains disclosure information required by the Government Accounting Standards Board (GASB).

Plan provisions are summarized in Exhibits IV and V.

The retirement provisions remain unchanged from the prior valuation. The health subsidy valuation reflects the increase in the maximum health subsidy premium from $508 to $702 for Members who are under age 65 or 65 and over with only Medicare Part B.

The valuation results were based on the assumptions as outlined in Exhibits VI through IX. Of note are the following economic assumptions:

- 8.0% annual interest
- 4.0% annual total payroll increases
- Annual individual salary increases, which vary by age, averaging 5.5% to 6% per year over a full 30-year career
- 3.0% annual increases in the Consumer Price Index

We have revised our assumptions regarding the expected increases in health subsidy amounts for the next few years. This was changed to bring our assumptions closer to future expectations based on today’s marketplace.

All other actuarial assumptions and methods remain unchanged since the last valuation. We believe the assumptions and methods used are appropriate for the valuation of the liabilities of the Retirement System at June 30, 2000.
This Valuation Summary contains an overview of our valuation results. More information on these results can be found in the Valuation Detail and Exhibit sections of this report.

A schedule containing all of the significant results of our valuation can be found on the next page.

CITY OF LOS ANGELES
CITY EMPLOYEES' RETIREMENT SYSTEM

Budget Requirements

The Charter of the City of Los Angeles requires that budget amounts for the City Employees' Retirement System be determined annually. In determining these amounts, the System currently uses the Projected Unit Credit Cost Method. The required annual contribution is made up of two parts:

- The Normal Cost, or the cost of the portion of the benefit that is earned each year.
- Amortization of Unfunded Actuarial Accrued Liability (UAAL) or Surplus: The UAAL represents liabilities accrued to date, that have not been funded by prior years’ Normal Costs. Changes in the UAAL or surplus due to assumption changes are amortized over 30 years and gains and losses are amortized over 15 years, both as a level percent of pay. Plan amendments are amortized over 30 years as a level percent of pay, unless the characteristics of the amendment dictate a shorter amortization period.

Below, we present a summary of budget requirements for the City Employees' Retirement System. In total, the recommended contribution decreased by 0.89% of payroll from last year.

<table>
<thead>
<tr>
<th>Recommended City Contributions For Fiscal Year 2001 – 2002</th>
<th>Percentage of Salary</th>
</tr>
</thead>
<tbody>
<tr>
<td>Contribution for Retirement, Disability, and Death Benefits</td>
<td>2.54%</td>
</tr>
<tr>
<td>Contribution for Health Subsidy Benefits</td>
<td>2.17%</td>
</tr>
<tr>
<td>Total Contribution</td>
<td>4.71%</td>
</tr>
</tbody>
</table>

A more detailed explanation of these results can be found in the Valuation Detail section of this report.
The following graph illustrates the contribution levels of the past few years for both the retirement benefits and the health subsidy benefits.
The graph below illustrates the effect of changes in plan provisions, changes in valuation method and assumptions, and gains and losses over the past year on the recommended System contribution.

**CONTRIBUTION DECREASED BY 0.89% OF PAY**

The primary reason for the reduction in the contribution rate is positive investment performance. However, the asset gains were partially offset by the change in the maximum health subsidy from $508 per month to $702 per month. Additionally, the increase in carrier rates for the health subsidy benefit caused an increase in the contribution rate.
CITY OF LOS ANGELES  
CITY EMPLOYEES' RETIREMENT SYSTEM

System Assets

The following asset information regarding cash flow and market values were provided to us by the Retirement Office. We have not audited or verified these figures.

<table>
<thead>
<tr>
<th></th>
<th>June 30, 2000</th>
<th>June 30, 1999</th>
<th>Percent Change</th>
</tr>
</thead>
<tbody>
<tr>
<td>Total System Assets</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Market Value</td>
<td>$7,881,497,296</td>
<td>$7,279,063,114</td>
<td>8.3%</td>
</tr>
<tr>
<td>Actuarial Value</td>
<td>7,389,277,187</td>
<td>6,653,174,660</td>
<td>11.1%</td>
</tr>
</tbody>
</table>

The rate of return on total plan assets was as follows:

<table>
<thead>
<tr>
<th></th>
<th>Rate of Return</th>
</tr>
</thead>
<tbody>
<tr>
<td>Market Value</td>
<td>10.60%</td>
</tr>
<tr>
<td>Actuarial Value</td>
<td>13.64%</td>
</tr>
</tbody>
</table>

The rate of return was based on the following cash flow information:

- Contributions
  - City: $106,610,187
  - Members: 64,579,401
- Pensions Paid
  - Retirement Allowances: 287,805,753
  - Family Death Benefits: 1,633,745
  - Health Benefits: 29,987,151
- Refunds of Member Contributions: 12,371,409
- Administration Expenses: 7,546,777
- Investment Earnings: $770,589,430
The 13.64% rate of return on the actuarial value is greater than the 8.0% rate assumed for the prior year, which resulted in an actuarial gain. The budgeted contribution for the System would have been greater if not for this gain.

More detail on System assets can be found in the Exhibits section of this report.

</tbody>
</table>

The actuarial value of assets is a market-related value, where gains and losses are recognized over a five-year period. Gains and losses represent the difference between actual and expected market values. Expected market values are based on the actuarial return assumption of 8%.
CITY OF LOS ANGELES
CITY EMPLOYEES' RETIREMENT SYSTEM

Summary of System Funding

As of June 30, 2000, the System had assets at actuarial value equal to 107.3% of the present value of retirement and health subsidy benefits accrued to that date. When compared to the present value of all benefits expected to be paid by the System (including benefits expected to be earned in the future), assets equal 82.2% of liabilities. This remaining unfunded liability is to be funded by future City and Member contributions to the System.

The City contributions are made up of two parts:

- Normal Cost Contributions: These contributions are determined as the cost of the System benefits accruing each year. If all assumptions are realized and there are no gains or losses, this amount will remain unchanged as a percent of pay unless the average age of the population increases. In this case, contributions as a percent of pay will increase. The contributions will also increase as a dollar amount as total covered payroll increases.

- Amortization of Unfunded Actuarial Accrued Liability (UAAL) or Surplus: The UAAL represents liabilities accrued to date, that have not been funded by prior years' Normal Costs. If the accumulated Normal Costs exceed the liabilities accrued to date, the net result would be a Surplus. Changes in the UAAL (or Surplus) due to assumption changes are amortized over 30 years and gains and losses are amortized over 15 years, both as a level percent of pay. Plan amendments are amortized over 30 years as a level percent of pay, unless the characteristics of the amendment dictate a shorter amortization period. If in the future all assumptions are realized and if there are no future gains or losses, the current contribution percentage will not change until the pieces that make up the UAAL (or Surplus) are fully amortized. However, it will increase as a dollar amount as the total covered payroll increases.

The total contribution will be the sum of the Normal Cost and UAAL contributions.

The following graphs are an illustration of expected future contribution levels. These contribution levels are based on the current Charter provisions and assume no future gains or losses. They are also based on our assumption of 4.0% annual increase in total System payroll, and a population with the same average age and service characteristics as the current population. If actual experience differs from these assumptions, the contribution levels will change.
Contributions are Initially Level as a Percent of Pay
(Includes Retirement and Health Subsidy Benefits)

Dollar Contributions Increase as Payroll Increases
(Includes Retirement and Health Subsidy Benefits)

System Membership

Computer tapes containing data on System membership as of June 30, 2000 were supplied to us by the Retirement Office. On the following schedule we present a summary of System membership at June 30, 2000 and June 30, 1999. Pension amounts shown are those in effect on June 30, 2000, and do not include the cost-of-living adjustments that were effective on July 1, 2000. However, all July 1 increases were reflected in our valuation calculations.

It was necessary to make assumptions for approximately 3.5% of the data records when the information given to us was unreasonable and incomplete. A majority of these adjustments were for service and pay for vested terminated employees. These assumptions did not materially affect the results of our valuation.

The number of total active Members increased by 7.7% since the last valuation. The total number of retired Members and their beneficiaries increased by 1.7%, and the average retirement benefit amount increased by 5.0%.

More detail on System membership, including breakdowns by age and service categories, can be found in Exhibits XI, XII, and XIII of this report.

CITY OF LOS ANGELES
CITY EMPLOYEES' RETIREMENT SYSTEM

VALUATION OF RETIREMENT BENEFITS

Actuarial Balance Sheet

The purpose of the Actuarial Balance Sheet is to compare System assets with System liabilities in order to define the portion of the liabilities which need to be funded by the City in the future. The Balance Sheet information in the next two pages represents assets and liabilities for retirement benefits only.

System liabilities equal the present value of all future benefits expected to be paid to current and future retirees and beneficiaries of the System. For the purpose of the Actuarial Balance Sheet, system assets are equal to the sum of:

- the assets currently available to pay benefits,
- the present value of future contributions expected to be made by current System Members, and
- the present value of future contributions expected to be made by the City.

The last item, the present value of future City contributions, is made up of two parts:

1. The Present Value of Future City Normal Costs: Using the Projected Unit Credit Cost Method, the City budgets a certain percentage of payroll to fund benefits for System Members. The Normal Cost is the cost of benefits earned in each year. Normal Cost is funded from a Member's date of employment to the average expected retirement date. An adjustment is made for the deductions which will be made from the salaries of System Members. For the 2000 – 2001 fiscal year, the Normal Cost percentage is 7.57% of pay. The present value of these future City Normal Cost contributions represents one piece of the value of future City contributions.

2. The Unfunded Actuarial Accrued Liability: The portion of the present value of future City contributions which will not be funded by the future Normal Cost contributions is the Unfunded Actuarial Accrued Liability (UAAL). The UAAL arises from prior contributions that were different than the current Normal Cost percentage. This usually results from benefit or assumption changes and the net effect of prior gains and losses. If the City had always contributed the current Normal Cost, if there were no prior benefit or assumption changes and if actual experience exactly matched the actuarial assumptions, the Normal Cost would be sufficient to fund all benefits and there would be no UAAL. If the accumulated Normal Costs exceed the liabilities accrued to date, then there would be a Surplus. This liability or surplus is funded based on the provisions of the City Charter.

The Actuarial Balance Sheet can be found on the following pages.
The following chart illustrates the breakdown of Balance Sheet assets and liabilities of the retirement benefits of the System. It shows that about 40% of the System's liabilities are for terminated and retired Members and their beneficiaries, and 60% for active Members. About 83% of System assets consist of currently available assets, and 17% consist of future contributions from the City and the Members.

CITY EMPLOYEES' RETIREMENT SYSTEM
VALUATION OF RETIREMENT BENEFITS

Budget And Recommended Contributions

Section 506 of the City Charter requires that an annual budget be prepared which sets forth the estimated cost of maintaining the retirement fund on a reserve basis.

The Charter defines the annual budget amount to be the sum of the Normal Cost plus an amount to amortize the Unfunded Actuarial Accrued Liability (UAAL). The Normal Cost and Actuarial Accrued Liability are currently calculated using the Projected Unit Credit Cost Method.

The Normal Cost is the cost of the System benefits earned each year. The Normal Cost consists of two parts: the first part, which is funded by Member contributions, is a specified percentage of the Member's pay; the second part, which is funded by the City, is the balance after deducting the Member paid portion from the total Normal Cost percentage.

The amortization of the UAAL (or Surplus) is the payment stream required to fund the difference between System liabilities and the sum of the System assets, future Member contributions, and future City Normal Cost contributions. (See section on the Actuarial Balance Sheet.) The method of amortization is defined in the Charter.

The recommended retirement contribution decreased primarily due to asset gains.

In our opinion, if the recommended contributions included in this report are adopted, the System will be maintained in compliance with the Charter of the City of Los Angeles and in accordance with the methods and assumptions underlying the calculations.

The Plan Change at 6/30/99 indicated above reflects the three-year extension of the early retirement window through September 30, 2002. This window provides unreduced pensions to Members who retire on or after age 50 with at least 30 years of service.
In November 1994, the Governmental Accounting Standards Board (GASB) adopted Statement No. 25, changing the way in which governmental retirement systems must report financial information. This replaced the requirements of GASB No. 5. The statement became effective for plan years beginning after June 15, 1997. This statement applies only to retirement benefits paid by the System.

This report includes two tables showing information required to be reported under GASB No. 25. The first table shows a six-year history of funding progress (a comparison of Actuarial Assets with the Actuarial Accrued Liability, and a comparison of UAAL with covered payroll). This table shows significant funding progress over the last six years.

The second table shows the Annual Required Contribution (ARC) as computed under GASB No. 25, and it shows what percent of this amount was actually received. The current method used for determining CERS contributions satisfies the GASB requirements. As long as actual contributions are made in accordance with the actuarially recommended rates, the “Percentage Contributed” shown on this table will always be 100%. Otherwise, additional financial disclosures will be necessary.

The graph on the next page compares assets to liabilities for retirement benefits for the last six years. Actuarial assets exceed liabilities for pensioners, and are 109.1% of total retirement liabilities at June 30, 2000. Based on the market value of assets, the funded ratio for retirement benefits is 116.4%.

CITY OF LOS ANGELES
CITY EMPLOYEES' RETIREMENT SYSTEM

VALUATION OF RETIREMENT BENEFITS

Member Contributions

Members contribute to the Retirement System based on schedules contained in the City Administrative Code. For Members commencing participation before February 1, 1983, different contribution rate schedules apply to different groups because of various collective bargaining agreements. For purposes of this valuation, we have assumed that the contribution rates for these Members correspond to those effective on July 1, 1981. These contribution rates can be found in Exhibit X.

If certain Members from this group contribute at a lower rate through a collective bargaining agreement, the City should contribute 95% of the amount that would have been contributed by Members without the bargaining agreements. This percentage reflects the fact that certain participants will terminate when only eligible for a return of their contributions. The City does not need to contribute the amounts that are expected to be refunded after the Members' termination.

In the prior valuation report, it was recommended that 94% of the defrayed amount be contributed. This percentage generally increases with the aging of the group affected by the defrayal, and as the probability that these Members will terminate and get a refund of contributions decreases.

For Members commencing participation after February 1, 1983, the contribution rate is 6%.
Family Death Benefit Insurance Plan

Section 511.1 of the City Charter establishes the Family Death Benefit Insurance Plan. This Plan provides protection for the families of Members who die before becoming eligible for service retirement. The benefits provided by the Plan are similar to those provided to survivors under Social Security. Members are eligible for dependent benefits after 18 months of participation in the Family Death Benefit Plan. They are eligible for surviving spouse benefits after ten years of participation in the Plan.

These benefits were updated in 1997 to reflect recent increases in Social Security levels.

Currently, the City and Members share the cost of the Plan. Each contributes $3.20 per month. This contribution rate is reviewed every two years to determine if the level of contributions is appropriate. This rate will be next reviewed on June 30, 2001.
CITY OF LOS ANGELES
CITY EMPLOYEES' RETIREMENT SYSTEM

VALUATION OF HEALTH SUBSIDY BENEFITS

Introduction

Division 4, Chapter 11 of the Administrative Code provides that a health insurance subsidy be paid to retired Members of the City Employees' Retirement System. This subsidy is a monthly payment which retirees apply to the cost of health insurance. Retirees can select among a variety of plans sponsored by the City. In general, Members are eligible for subsidy at retirement after age 55 with 10 years of service, or retirement at age 70 (if it was compulsory). Exhibit V summarizes the provisions of the Health Insurance Premium Subsidy.

The System is building a reserve through the advance funding of the health insurance subsidy for current retirees and for active Members with sufficient service to receive a health subsidy (ten years). The actuarial value of the reserve available at June 30, 2000 is $810,302,613 (the market value is $864,279,102).

This section of the report contains the results of the June 30, 2000 valuation of the retiree health insurance premium subsidy. In determining the budget amounts for the fiscal year 2001 – 2002, we have used the same funding method and methods of amortization used in the funding of the retirement benefits. We have also used the same economic and demographic assumptions as those used in the retirement valuation. In addition, special health cost trend assumptions were used. A summary of the economic assumptions follows:

- 8.0% annual interest
- graded medical cost trend rates of 8.50% in 2000-2001 decreasing gradually to 6.0% in 2010 and beyond for benefits paid before age 65, and benefits paid to Members without Medicare
- medical cost trend rates of 15.00% in 2000-2001 decreasing gradually to 6.00% in 2015 and beyond for benefits paid after age 65 from System HMO plans
- graded medical cost trend rates of 10.00%, decreasing gradually to 6.00% in 2015 and beyond for benefits paid after age 65 for Members who join the PPO
- graded dental trend rates of 8.00% in 2000-2001 decreasing to 6.0% in 2008 and beyond.
- Medicare Part B premium trend rates of 6.0%

We believe these are appropriate for use in the valuation of health subsidy liabilities of the City Employees' Retirement System at June 30, 2000. These assumptions are described in more detail in Exhibit VII.
CITY OF LOS ANGELES
CITY EMPLOYEES' RETIREMENT SYSTEM

VALUATION OF HEALTH SUBSIDY BENEFITS

Actuarial Balance Sheet

The purpose of the Actuarial Balance Sheet is to compare System assets with System liabilities in order to define the portion of the liabilities, which need to be funded by the City in the future. The Balance Sheet information in the next two pages represents assets and liabilities for health subsidy benefits only.

System liabilities equal the present value of all future health subsidy benefits expected to be paid to current and future retirees and beneficiaries of the System.

For the purpose of the Actuarial Balance Sheet for health subsidy benefits, System assets are equal to the sum of (a) the assets currently available to pay benefits; and (b) the present value of future contributions expected to be made by the City.

No Member contributions are required for health subsidy benefits.

The last item, the present value of future City contributions, is made up of two parts:

1. The Present Value of Future City Normal Costs: Using the Projected Unit Credit Cost Method, the City budgets a certain percentage of payroll to fund benefits for System Members. The Normal Cost is the cost of benefits earned in each year. Normal Cost is funded from a Member's date of employment to the average expected retirement date. For the 2001 – 2002 fiscal year, the Normal Cost percentage for health subsidy benefits is 2.15% of pay. The present value of these future City Normal Cost contributions represents one piece of the value of future City contributions.

2. The Unfunded Actuarial Accrued Liability: The portion of the present value of future City contributions which will not be funded by the future Normal Cost contributions is the Unfunded Actuarial Accrued Liability (UAAL). The UAAL arises from prior contributions that were different than the current Normal Cost percentage. This usually results from benefit or assumption changes and the net effect of prior gains and losses. If the City had always contributed the current Normal Cost, if there were no prior benefit or assumption changes and if actual experience exactly matched the actuarial assumptions, the Normal Cost would be sufficient to fund all health subsidy benefits and there would be no UAAL. If the accumulated Normal Costs exceed the liabilities accrued to date, then there would be a Surplus. This liability or surplus is funded based on the provisions of the City Charter.

The Actuarial Balance Sheet can be found on the following pages.
The following chart illustrates the breakdown of Balance Sheet assets and liabilities for health subsidy benefits. It shows that about 36% of the System's liabilities are for retired Members and their beneficiaries, and 64% for active Members. About 76% of System assets consist of currently available assets, and 24% consist of future contributions from the City.

CITY OF LOS ANGELES  
CITY EMPLOYEES' RETIREMENT SYSTEM  
VALUATION OF HEALTH SUBSIDY BENEFITS  

Budget and Recommended Contributions

Under Division 4, Chapter 11 of the Administration Code, certain retired employees are eligible for a health insurance premium subsidy. This subsidy is to be funded entirely by the City Employees' Retirement System.

Based on the actuarial value for this reserve, we have calculated the required funding amount for the fiscal year beginning in 2001.

The contribution for health subsidy benefits increased from 0.67% of payroll for 2000 - 2001 to 2.17% of payroll for 2001 - 2002. The asset gains were offset by higher premiums being charged by the carriers and higher maximum health subsidy.

The Plan Change at 6/30/99 indicated above reflects the three-year extension of the early retirement window through September 30, 2002. This window provides unreduced pensions to Members who retire on or after age 50 with at least 30 years of service. The incidence of early retirement increases the liability for the health subsidy benefits.

CITY OF LOS ANGELES
CITY EMPLOYEES' RETIREMENT SYSTEM
VALUATION OF HEALTH SUBSIDY BENEFITS

Summary of Funding Process

The City is funding in advance for the Health Insurance Premium Subsidy. A brief summary of this funding process is as follows.

The City began funding for these benefits when the health subsidy plan was first initiated, by commencing funding when a Member retired. However, this funding was limited below the actual cost, since the contributions were determined by recognizing only 3% annual increases in the subsidy due to medical trend.

Beginning in 1987, the assumption for annual increases in the health insurance subsidy benefits was increased to 8% per year. Also, the City began advance funding for active Members who are eligible to retire.

Following the June 30, 1989 Study of Plan Experience, in order to fully reflect the cost of benefits due to expected inflation, the 8% medical trend rate assumption was changed to a series of medical trend rates that graded down from 15% in 1991 to 7% in 2002 and thereafter. The City also began advance funding for active members with sufficient service to receive a health subsidy (10 years).

Effective with the June 30, 1992 Study of Plan Experience, the medical and dental trend rates were updated. Separate rates were used for pre- and post-age 65 benefits to reflect the differences in cost increases after Medicare eligibility. Effective with the June 30, 1993 valuation, the ultimate trend rate was reduced from 7% to 6% to better reflect our expectations of future medical inflation and utilization.

Effective with the June 30, 1995 Study of Plan Experience, the medical and dental trend rates were again updated due to favorable expectations of experience under the Plan. Further reduction in the rates were assumed effective June 30, 1997.

Effective with the June 30, 1998 Study of Plan Experience, the trend rates were updated to reflect how Medicare Reform will affect the System's future health subsidy costs.

Effective with the June 30, 2000 valuation, the trend rates were updated to reflect current market conditions. For details on these trend rates, refer to Exhibit VII.

In valuing the liabilities of the health subsidy, we projected future cash flows by applying medical trend rates to current subsidy amounts. The current average monthly claim rates we used as the starting point for our projections depend on the experience of the plan and plan provisions. These rates are summarized in Exhibit VIII. To determine the present value of future health insurance subsidy benefits, we discounted future cash flows to June 30, 2000 using a valuation rate of 8%.
For the purpose of determining contributions, we have used the Projected Unit Credit Funding Method. Our assumptions and methods are described further in Exhibit VII.

CITY OF LOS ANGELES
CITY EMPLOYEES' RETIREMENT SYSTEM

Summary of Retirement Benefits

1. Eligibility: Members are eligible on their first day of City employment.

2. Final Compensation: Highest 12-month average salary.

3. Service Retirement:
   A) Eligibility: Age 55 with 10 years of service, or any age with 30 years of service, or age 70.
   B) Benefit: 2.16% of Final Compensation for each year of service.
   C) Reduction for Early Retirement: Unreduced for retirement after age 60, or after age 55 with at least 30 years of service. Reduction factors apply for earlier retirement.
   D) Form of Payment: Benefit payable for life with 50% continuance to eligible spouse or domestic partner if employee had that coverage at time of retirement. Larger continuances are available with actuarial reduction.
   E) Special Early Retirement Benefit: Unreduced pensions are available for employees age 50 with 30 years of service who retire prior to September 30, 2002.
4. Disability Retirement:
   A) Eligibility: Five years of continuous service and physically or mentally incapacitated so unable to perform duties of position.
   B) Benefit: 1/70 of Final Compensation per year of continuous service. If service is less than 23-1/3 years, then service is projected to retirement, with a maximum service of 23-1/3 years.
   C) Form of Payment: Benefit payable for life with 50% continuance to eligible spouse or domestic partner if employee had this coverage at time of retirement. Larger continuances are available with actuarial reduction.

5. Deferred Service Retirement:
   A) Eligibility: Five years of service prior to termination of City service. Member must leave contributions on deposit.
   B) Benefit: Same as Service Retirement payable anytime after age 55, provided at least 10 years have elapsed from date of original membership (or anytime after age 70).
   C) Form of Payment: Same as Service Retirement.

6. Pre-retirement Death Benefits:
   A) Not Eligible for Disability or Service Retirement: Member receives (i), (ii), and (iii) where:

   (i) = Accumulated contributions with interest.

   (ii) = Limited monthly pension equal to half the average monthly salary for the year before death. Benefit is payable to surviving spouse, minor children, dependent parents or domestic partner, and is payable for a period of 2 months times the number of completed years of service, to a maximum of 12 months.

   (iii) = Family Death Benefit Insurance Plan benefit, if a qualified Member.
B) Eligible for Disability Retirement or Duty-Related Death:

Member receives (i) and (ii) where:

(i) = 100% of the benefit the Member would have received if he or she had been granted an Option 1 (Joint and 100%) actuarially reduced disability benefit on the day before death.

(ii) = Family Death Benefit Insurance Plan benefit, if a qualified Member.

Surviving spouse or domestic partner may elect A in lieu of B.

C) Eligible for Service Retirement

Surviving spouse or domestic partner receives a lifetime benefit equal to

100% of the benefit the Member would have been entitled to if he or she had been granted an Option 1 (Joint and 100%) actuarially reduced Service Retirement benefit on the day before death.

Benefits under the Family Death Benefit Insurance Plan are not available.

Surviving spouse or domestic partner may elect A or B in lieu of C.

7. Post-retirement Death Benefits:

Beneficiary receives (i), (ii), and (iii), where:

(i) = 50% continuance to surviving eligible spouse or domestic partner, if covered under the plan.

(ii) = Return of unused contributions and interest (provided normal cash refund annuity was selected) and any accrued but unpaid retirement allowance at death of last beneficiary eligible for monthly allowance.

(iii) = $2,500 death benefit allowance for burial expenses at death of retired member.
8. Post-retirement Cost-of-Living Benefits:

Each July 1, the benefits are increased by the percentage increase in CPI (to a maximum of 3%). Increases in CPI above 3% are "banked" to apply in years when CPI increase is less than 3%.

If benefit has been paid less than 12 months, the 3% increase is proportionately decreased.

9. Employee Contributions:

Pre-February 1983 participants:

Members are assumed to contribute per the schedule effective July 1, 1981. To the extent that Members contribute less than the full rates, the City should contribute 95% of the amounts otherwise paid by the Member.

Post-January 1983 participants:

Members contribute 6% of pay.

10. Family Death Benefit Insurance Plan:

A) Eligibility:

Employee may elect coverage after 18 months of City retirement service.

B) Benefits:

Benefits similar to those provided by Social Security Survivors' Insurance are payable if Member dies in active service after 18 months of Family Death Benefit Plan membership.

C) Cost:

It is recommended that the Member and City each contribute $3.20 per month.
CITY OF LOS ANGELES
CITY EMPLOYEES' RETIREMENT SYSTEM

Summary of Health Subsidy Benefits

Eligibility: Members who retire with ten years of service. Subsidy begins at age 55. Medical benefits are available to an eligible spouse or domestic partner after the death of the eligible Member.

Subsidy:

Medical

For retired Members under age 65 or 65 and over with only Medicare Part B:

A percentage of the Maximum Subsidy, or the actual premium paid to a City approved health carrier, if less.

The percentage is 4% for each year of service, up to a maximum of 100% after 25 years.

Maximum Subsidy: The maximum is the rate currently paid for active City employees. As of July 1, 2000, this amount is $702 per month.

For retired Members age 65 and over with Medicare Parts A and B:

A percentage of the premium paid to a City approved health carrier. The percentage is 75% with 10 - 14 years of service, 90% for 15-19 years of service and 100% for 20 years of service or more. Medicare Part B premiums are also paid.
For eligible surviving spouse or domestic partners:

The same subsidy provided to the Member, except this benefit is limited to the Kaiser single party premium for Members without Medicare A and B.

**Dental**

4% per year of service to a maximum of $34.98 for Blue Cross PPO and $12.53 for Safeguard.

Rehire for Former Employees:

All former employees are assumed not to be rehired.
Dependents: Where no other information is available, Members are assumed to have two children with a three-year difference in age. The eldest is assumed to reach age 21 when the participant reaches age 45.

Proportion of Members with Spouses or Domestic Partners at Retirement: 76% of male employees and 56% of female employees are assumed to be married or to have a qualified domestic partner at retirement. Wives are assumed four years younger than husbands.

Funding Method: For retirement benefits: The Projected Unit Credit Cost Method.

For the Family Death Benefit Insurance Plan: One year term cost funding method, with an adjustment for the funded status of the plan at each valuation date.

Asset Valuation Method: The actuarial value of assets is determined by phasing in, over five years, the difference between the actual and expected realized and unrealized appreciation. The expected appreciation is based on the assumed 8.00% rate of return. The actuarial value of assets can be no less than 80% and no greater than 120% of the market value of assets.

Special Early Retirement Rate: Employees eligible for an enhanced retirement benefit during the 1998-2002 window period are assumed to retire at the rate of 25% per year.

Mortality: 1971 Group Annuity Mortality Table, with a one-year age setback for males and a five-year age setback for females.

Probability of Termination of Employment: Same rates as used in valuation of retirement benefits. See retirement report for details.

City Medical Plan Coverage: 80% of all retirees are assumed to receive a subsidy for a City approved health carrier.

Spouses and Domestic Partners: 91% of male and 66% of female retirees who receive a subsidy are assumed to be married or have a qualified domestic partner and elect dependent coverage.

Medicare Coverage: 85% of retirees are assumed to elect Medicare Parts A & B.

Dental Coverage: 65% of retirees are assumed to elect dental coverage.

Spousal Coverage: With regard to Members who are currently alive, 75% of eligible spouse or domestic partners are assumed to elect continued health coverage after the Member’s death. With regard to deceased Members, 70% of the current eligible survivors are assumed to elect health coverage.

Funding Method: Projected Unit Credit Funding Method.

Asset Valuation Method: The actuarial value of assets is determined by phasing in, over five years, the difference between the actual and expected realized and unrealized appreciation. The expected appreciation is based on the assumed 8.00% rate of return. The actuarial value of assets can be no less than 80% and no greater than 120% of the market value of assets.

CITY OF LOS ANGELES
CITY EMPLOYEES' RETIREMENT SYSTEM

Rates Of Separation From Active Service

A schedule of the probabilities of termination of employment due to the following causes can be found on the following pages:

1. Ordinary Withdrawal: Member terminates and elects a refund of Member contributions.
2. Service Retirement: Member retires after meeting age and service requirements for reasons other than disability.
3. Ordinary Disability: Member receives disability retirement; disability is not service related.
4. Service Disability: None assumed.
5. Ordinary Death: Member dies before eligibility for retirement; death is not service related.
6. Service Death: None assumed.
7. Death While Eligible for Service Retirement: Member dies before retirement but after meeting age and service requirements for service retirement.

Each rate represents the probability that a Member will separate from service at each age due to the particular cause. For example, a rate of 0.0020 for a Member's service retirement at age 50 means we assume that, on average, 2 out of 1,000 Members who are age 50 will retire at that age.
